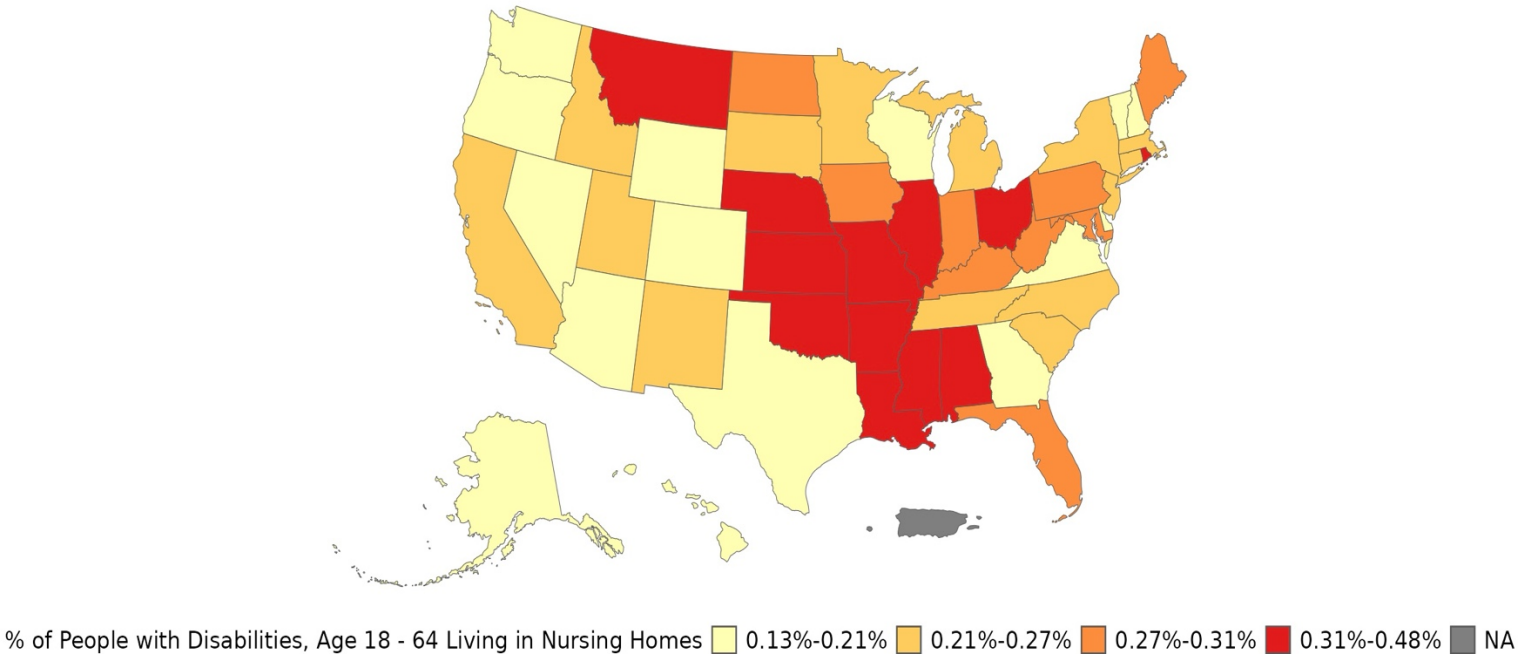
Rates of Nursing Home Institutionalization Among People with Disabilities Ages 18 to 64

Published by ADA PARC September 2025

The Americans with Disabilities Act (ADA) mandates the right to live in the community with supports instead of living in a nursing home. The U.S. Supreme Court upheld this right in the landmark Olmstead decision in 1999[1].

Despite this right to live in the community, some states are doing worse on overall nursing home rates, and some are doing better to support people with disabilities to live in the community. The map and table below display state percentages for working-age people with disabilities (ages 18-64) residing in nursing homes. Higher percentages (represented by a darker color) mean more people with disabilities (PWD) are living in nursing homes. In comparison, lower percentages (light colors) mean fewer people in nursing homes and more PWD live in community [2].

Map: People with Disabilities (PWD) Ages 18 to 64 Living in Nursing Homes by U.S. State (4 quartiles)



Data for Puerto Rico, the Virgin Islands, and Guam is unavailable.
